

Enjoy the silence

Reduce sound effectively –
with HANNO!

The HANNO advantages at a glance

- Effective sound insulation for quieter appliances and greater acoustic comfort
- Comfort and relaxation in your own home
- Many years of experience for comprehensive acoustic expertise

Products for appliance construction

With sound-insulating materials from HANNO, machines and appliances run much more quietly. Particularly where different types of components and materials are joined, sound often reaches the surface. HANNO products decouple this sound effectively and help to avoid rattling noises.

HANNO offers a versatile product range for effective sound reduction in household appliances: The washing machine runs pleasantly quietly, while the air discharged from the vacuum cleaner is effectively filtered by HANNO foams. Even coffee machines can be insulated against excessive noise.

- Do you want to reduce structure-borne noise and rattling noises?
- Do you want to reliably seal machine parts?
- Do you want to install seals?
- Do you want to filter air flows?

HANNO products decouple components and thereby reduce the transmission of structure-borne noise. For significantly quieter machines and appliances.

Then we particularly recommend these products:

Surface protection during milling and machining

Hanno®-Protecto

Highly absorbent special foams. The surfaces are designed for a wide range of problems (e.g. aluminum lamination, skinning).

Liquid sealing

Hanno®-PE-Foams

These foams are characterized by a particularly high resistance to hydrolysis and chemical resistance.

Low-frequency absorption

Hanno®-Composite Foam

Open-cell, elastic flake composite foam made from PUR foams with very good acoustic properties. Very high densities up to approx. 200 kg/m³ are available.

Seals

Hanno®-Cellular Rubber

The closed-cell, soft-elastic cellular rubber is particularly suitable for elastic seals of various types. HANNO offers a wide range of qualities for various areas of application.

Filtering sand / fluids

Hanno®-Filter Foam

Polyester-based PUR foam with an open-cell and regular pore structure. Elastic and tolerance-compensating.

No intentional use of PFAS

Hanno®-Tect-F-free

Reliably sound-absorbing and hydrophobic – manufactured without the intentional use of PFAS.
